I have designed a promotional website for a fitness company named Fitness Freaks. This is targeted to a wide range of audience who are interested in joining a club or a group in view of improving their physical fitness and well-being.

This website is mainly divided into 5 sections: (8 pages)

- Home (Subdivided into 2)
- Contact Us(Subdivided into 2)
- News
- About us(Subdivided into 2)
- Careers

Home:

In the home page, first I have created a header file (logo of the company) followed by an icon bar which has all the 5 sections mentioned above. The icon bar has been created using CSS and HTML.

Then, I have created a slideshow of three pictures using html and java script function named slideshow ().

I have used 2 more functions to go to the next and the previous slide.

After that, in a text box, I have created a hyperlink which takes us to another page name "Virtual Tour". This page consists of a video running on the entire screen. A java script function has been used again to manipulate the button "Play" and "Pause".

After that, I have created a vertical tab consisting of 4 cities. Whenever someone clicks on any city, it shows its office address there on top of the picture of that particular place. This again has been performed with the help of a java script function.

At the end, there is a footer file which is again the same footer file in all the pages. It consists of the social media links.

Contact us:

Like all other pages, the header (including icon bar) and footer files remains the same here.

After that, there is a form on the top of an image, which is provided for customers to contact the company. When they press the submit button, it is redirected to another page which shows their input. That is achieved by using PHP.

The form has been created by using CSS and HTML. A map has been placed on top of the form. First, I had to get an API key from Google maps website, using which I created the map. Then, I hardcoded the longitude and latitude of the location of the office which is being denoted by a red marker. For the marker, we have used a java script function.

News:

This webpage boasts of the awards and recognitions of the company. We have created a timeline using CSS and HTML. It shows all the important things we have achieved as a company along with year when it happened.

After the timeline, there are a few textboxes along with pictures that highlights our awards. Again, that has been created by using HTML and CSS.

About us:

In this page, I have mentioned the goal of our company and the courses which we offer. All these texts have been written on top of images using CSS and HTML. We have attached a hyperlink to a text which gets redirected to another webpage that shows the program details which we offer.

After that, we have attached three profiles who are an integral part of the company. It shows their picture, their name and their designation. (CSS and HTML used)

Careers:

In this page, we show the vacancies that are available in our company. We have created a table using HTML consisting of three columns under three headings:-

1. Job Title
2. Experience required.
3. Location

After that, we have attached a testimonial of our employees to let everyone know what they feel about our company. This has been created by using CSS mainly.

This website is also available online: http://fitnessfreaks.gq

This has been hosted in csserver:

Username – 17202833

Password - veTKzZCe

I hope you like my website. Thank You.
